

CASE STUDY

SUPERIOR WELLNESS

LOCATION:
Chesterfield, Derbyshire

SYSTEM SIZE:
31.85 kW

COMPONENTS:
98 x panels

ANNUAL CO2 SAVINGS:
6.9 tonnes

cactus.

Superior Wellness is Europe's largest hot tub distributor. They support a growing network of dedicated partners across the UK, USA and Europe.

Based in Chesterfield, this family-run business has grown significantly in recent years, including moving into their new 130,000 square ft warehouse, distribution centre and office in Chesterfield.

Cactus Energy worked alongside the award-winning company to help them significantly reduce their carbon footprint through the installation of a 30 kW solar PV system to their property.

We also helped them by putting them in touch with Derbyshire Council, who were able to offer financial support via a local government grant, 'The DE-Carbonise Your Business' Grant.

Rob Carlin, Managing Director comments:

"The office move, combined with the increase in orders, made us re-evaluate our sustainability strategy. We are delighted with the results from the solar panels by Cactus Energy so far, which have exceeded our expectations."

Since the installation, we are delighted to report that energy generation has already exceeded expectations. We look forward to working alongside Superior Wellness again in the future, to help them become even more green and save even more money.
